

# Revolutionary Mobile Innovations

COMPELSON Labs has years of experience in software development. We have a vast knowledge in developing mass market mobile applications as well as special tailor-made software solutions for large companies.

COMPELSON has developed innovative solutions such as the MOBILedit! platform, which is compliant with an extremely wide range of mobile phones. Creating new online and web-based services such as the mBoox technology, the Mobile Shopping List, plus powerful development libraries for third parties has put the COMPELSON name on the map. COMPELSON's innovative products are not only bringing valuable improvements, but creating new waves throughout the mobile world.

With COMPELSON you can offer new services that were always needed, but never before possible. Through our revolutionary products and services, you can attract new customers and stay ahead in the competitive mobile world.

# Software for Mobile Subscribers

## MOBILedit! - total control of the phone

MOBILedit! is a unique modular software package that allows users to control their mobile phones from a PC via Bluetooth, infrared or cable. MOBILedit! users can easily copy photos from phones, transfer documents, upload favorite ringtones, logos, and MP3's. They can dial numbers, send messages, receive calls, organize contacts, synchronize, edit organizer, install games and much more all on the comfort of a PC. See more at [www.mobiledit.com](http://www.mobiledit.com)

## Phone Easy Connect

Phone Easy Connect offers a complete connection service for everyone on the go—especially notebook users. This program does everything needed to get connected; installs phone modem drivers into the PC, creates dialup connection on the PC, navigates user and makes necessary phone settings. The user simply clicks and the phone connects him to the network. The application enables control of the connection and shows graphs regarding data transfers including data transmission counters, etc.

This is the solution network operators should provide to all their users. The modern design is fully customizable and skinnable. Visit [www.PhoneEasyConnect.com](http://www.PhoneEasyConnect.com)

## Doc to Phone Converter

### Documents on the go in any phone

This unique technology allows you to transfer Word documents from your PC to your mobile phone. You can read the document in your phone anytime. It is based on our mBox technology so it is compliant with most of the current phones. Smartphones are not required. Whether you are making notes for a speech, need to have contracts readily available, or doing a homework assignment, the document can be in your mobile phone and not just on a PC.

## MOBILedit! is the platform

We have created a platform called MOBILedit! The unique architecture of this system makes it possible to connect almost any phone and offer almost any possible functionality. One of MOBILedit!'s greatest strengths is the hundreds of phone models supported and we are constantly adding new phones from all manufacturers. MOBILedit! is the base for many different handset related solutions such as: complete phone to phone content copy; phone settings and backups; complex phone synchronizations; download kiosk for gaming and content; professional phone management; Word document to phone converter; phone to internet configurator; and phone analyzer.

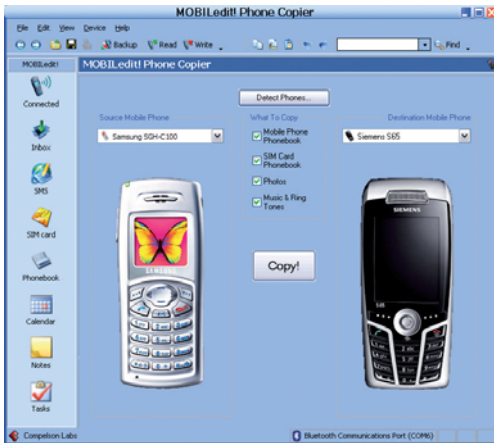

Because of the MOBILedit! system's open architecture, we are able to offer powerful development tools for any 3rd party solutions.

# Corporate and Operator Solutions

## MOBILedit! Phone Copier

MOBILedit! Phone Copier is the perfect tool for phone migrations. Customers no longer have to deal with the headache of entering contacts into a new phone. With MOBILedit! Phone Copier, both the old phone and the new phone are connected to the PC and all the data is

copied from one to the other. The manufacturer and model of the phones do not matter. We support thousands of combinations. MOBILedit! Phone Copier supports connections via Bluetooth, infrared or cable. This is a strategic solution for operators and phone sellers, especially with the launch of 3G.

## MOBILedit! Entertainment Kiosk

COMPELSON has designed the ultimate tool for the download of JAVA games, ringtones, logos and other mobile content. MOBILedit! Entertainment Kiosk has eliminated the complicated process of getting content from the internet onto a mobile phone. With MOBILedit! Entertainment Kiosk, users can click in the PC on any mobile content and have it immediately downloaded to a mobile phone. In combination with MOBILedit! Phone Copier you can build a really powerful mobile phone kiosk.

## MOBILedit! Enterprise

The Enterprise edition is suitable for providing services in phone shops, service centers and others of the like. MOBILedit! Enterprise includes: OTA settings for MMS,

WAP and internet; message encryption module; automatic message processing and much more.

## MOBILedit! Corporate

This is a special version of mobile management software designed to cater to the needs of corporations. User interface is simplified to a few buttons. It provides a variety of customizable synchronizations, intelligent backups, messaging, dialing, powerful contact editor, and centralized installation requiring minimal user rights.

## COMPELSON SyncML Server

This is the solution allowing remote synchronization of phone content over-the-air. Be synchronized with your corporate Exchange server or with any web server. Always have your contacts, calendar, tasks and emails actualized and have access to them through Outlook or the web. Have you lost your phone while traveling? Just visit any internet café and you have access to the latest content of your phone.

## MOBILedit! Forensic

This product gathers all data from a mobile phone with just a single click. It generates an extensive report that can be stored or printed and is admissible in a court of law. MOBILedit! Forensic is used by many law enforcement agencies worldwide and is becoming the standard in this area. See more at [forensic.mobiledit.com](http://forensic.mobiledit.com)

## Solutions for Developers & Third Parties

### MOBILedit! Phone Development Kit

We provide the core of our know-how to other companies and developers. You don't have to go through the years of research, implementation and testing of all the phones we went through. Using our development libraries anyone can quickly build solutions compliant with our large quantity of supported phones. Plus your solution will be continuously growing with MOBILedit! updates.

No matter if you wish to build software for messaging, dialing, phone managements, communication or SQL database solutions, your ideas are almost ready for deployment.

## Scripting Engine

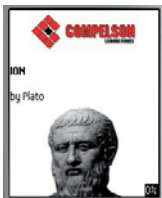

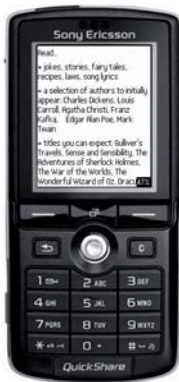

MOBILedit! Scripting Engine allows to fulfill almost any needs by writing scripts in Java, Basic, Perl, Python and other languages. No compilation necessary, just write the script and run it. Scripting Engine works in an event-driven way so programming of complicated tasks is very simple. You can also use a connection to databases or a response to external events, which makes this tool really incredible. MOBILedit! Scripting Engine comes with a set of scripts in source code such as sending messages according to an SQL database, message charts and contests, connections to Skype or messengers, etc.

And imagine, you can connect as many phones as your computer allows utilizing MOBILedit!'s wide range phone compatibility.

## Internet Mobile Services

### mBoox

We present a new form of mobile entertainment. With this extraordinary product, mobile users can download, store and read stories, magazines, jokes, books, guides and other texts virtually anywhere and anytime. COMPELSON mBoox are compliant with all Java enabled phones. Smartphones are not required. This is simply bringing ebooks to hundreds of millions of devices. Ebooks were never so close to success like now with the mBoox technology.

Users do not need internet access while reading. Customize colors, font size, reading speed; use bookmarks, search texts, and many other features. The technology consists of the server online solution and the phone specific ebook reader. Web server services are ready for publishers.

We also offer a portal with many books for download, such as Jack London, Shakespeare, Agatha Christie and hundreds of others. Imagine having access to all these wherever you are. See more at [www.mBoox.com](http://www.mBoox.com)

## Phone Shopping List

This is an online/Java application that has modernized the old crinkled paper list. Just send the item list from a web portal to any phone. Forget about the crumpled paper list in your pocket or the chance of leaving it at home. Then just shop and click to items you have completed. No need to have a pen with you.

The Phone Shopping List is not just for shopping; it can be used to create to-do lists, homework lists, personal goal lists, workout routines, and many more.

### Content Portal

We have also created a portal allowing to access a huge library of online books and texts, creating of shopping lists and sharing of mobile phone data.

### Phone Protection System

We have developed a unique phone protection system. Its core is an international database of phones that prevents mobile theft and helps to solve their loss. See more at [www.myPhoneSafe.com](http://www.myPhoneSafe.com)
